

AMENDMENTS TO THE CLAIMS

Please amend the claims as indicated in the following listing of all claims:

1-54 (canceled)

55. (Previously presented) A wireless communication system, comprising:

- a first wireless telephone subscribed to receive one or more services including a voicemail service from a first wireless service provider, the first wireless telephone being a personal wireless telephone and;
- a second wireless telephone subscribed to receive one or more services including a hands-free dialing service from a second wireless service provider and sharing at least one service of the one or more services with the first wireless telephone, the second wireless telephone being a vehicular wireless telephone integrated into an electrical control system of a vehicle, a home location register servicing the vehicular wireless telephone indicating a sharing of the voice mail service of the personal wireless telephone with the vehicular wireless telephone, the home location register instructing a mobile switching center to reroute a call to a voice mail account of the personal wireless telephone responsive to detection of a no answer by the vehicular wireless telephone of the call;
- the first wireless telephone and the second wireless telephone sharing a single wireless service plan administered by the first wireless service provider or the second wireless service provider, and
- a single billing report under the single wireless service plan, the single wireless service plan including a connectivity service for sharing information between the vehicular wireless telephone and the personal wireless telephone.

56. (Previously presented) A wireless communication system as in claim 55 comprising: the vehicular wireless telephone including a receiver for receiving display image data encoded according to a Moving Pictures Experts Group (MPEG) standard and a display for displaying said MPEG encoded image data, the connectivity service

including relaying calls carrying said MPEG encoded image data to a personal wireless telephone for display responsive to subscriber input.

57. (Previously presented) A wireless communication system as in claim 55 comprising: the second wireless service provider providing a shared concierge service including roadside assistance and navigation services, said connectivity service delivering navigation directions to said personal wireless telephone responsive to a comparison of the telephone number of the personal wireless telephone with telephone numbers of a database of personal wireless telephone numbers authorized to receive navigation directions.

58. (Previously presented) A wireless communication system as in claim 55 comprising: the second wireless service provider providing a shared concierge service including a navigation service responsive to receiving a request to share said concierge service at said second wireless service provider.

59. (Canceled):

60. (Previously presented) A wireless communication system as in claim 55 comprising: the personal wireless telephone transferring an electronic mail message to the vehicular wireless telephone, the vehicular wireless telephone comprising a larger display than said personal wireless telephone, said connectivity service including electronic mail message sharing responsive to receiving a request for sharing said electronic mail message service at said first wireless service provider.

61. (Previously presented) A wireless communication system as in claim 55 comprising: the personal wireless telephone receiving concierge service of the second wireless service provider, responsive to receiving a request to share said concierge service at said second wireless service provider.

62. (Canceled)

63. (Previously presented) A wireless communication system, comprising:
a first wireless telephone subscribed to receive a first call service measured by
communication minutes and a second call service measured by a predetermined
number of short message service messages and a voicemail service from a first
wireless service provider, the first wireless telephone being a personal wireless
telephone and;
a second wireless telephone subscribed to receive a third call service comprising a
concierge service from a second wireless service provider and sharing at least one
service of the first, second or third call services between the first wireless
telephone and the second wireless telephone, the second wireless telephone being
a vehicular wireless telephone integrated into an electrical control system of a
vehicle, a home location register serving the vehicular wireless telephone
indicating a sharing of the voice mail service of the personal wireless telephone
with the vehicular wireless telephone, the home location register instructing a
mobile switching center to reroute a call to a voice mail account of the personal
wireless telephone responsive to detection of no answer by the vehicular wireless
telephone of the call;
the first wireless telephone and the second wireless telephone sharing a single wireless
service plan administered by the first wireless service provider or the second
wireless service provider, and
a single billing report under the single wireless service plan, the personal wireless
telephone and the vehicular wireless telephone sharing two of the communication
minutes, the predetermined number of short message units and the concierge
service under the single wireless service plan,
the single wireless service plan further comprising a connectivity service for sharing
information between the vehicular wireless telephone and the personal wireless
telephone, the connectivity service including the downloading of stored telephone
numbers from one of said vehicular wireless telephone and said personal wireless
telephone to the other of said personal wireless telephone and said vehicular
wireless telephone responsive to an authentication code.

64. (Previously presented) A wireless communication system, comprising:
a first wireless telephone subscribed to receive a first call service measured by
communication minutes and a second call service measured by a predetermined
number of short message service messages from a first wireless service provider,
the first wireless telephone being a personal wireless telephone and;
a second wireless telephone subscribed to receive a third call service comprising a
concierge service from a second wireless service provider and sharing at least one
service of the first, second or third call services between the first wireless
telephone and the second wireless telephone, the second wireless telephone being
a vehicular wireless telephone integrated into an electrical control system of a
vehicle;
the first wireless telephone and the second wireless telephone sharing a single wireless
service plan administered by the first wireless service provider or the second
wireless service provider, and
a single billing report under the single wireless service plan, the personal wireless
telephone and the vehicular wireless telephone sharing two of the communication
minutes, the predetermined number of short message units and the concierge
service under the single wireless service plan,
the single wireless service plan further comprising a connectivity service for sharing
information between the vehicular wireless telephone and the personal wireless
telephone, the connectivity service including the downloading of stored telephone
numbers from one of said vehicular wireless telephone and said personal wireless
telephone to the other of said personal wireless telephone and said vehicular
wireless telephone responsive to an authentication code.

65. (Previously presented) The wireless communication system recited in claim 64,
wherein the second wireless telephone is subscribed to receive one or more services from a
second wireless service provider comprising rerouting a call to a voice mail account of the
personal wireless telephone, the call intended for receipt by the vehicular wireless telephone, the
rerouting being responsive to detection that the vehicular wireless telephone is not answering the
call.

66. (Previously presented) The wireless communication system recited in claim 64, wherein

the second wireless service provider is different from the first wireless service provider; and

revenue obtained under the single wireless service plan is divided between the first wireless service provider and the second wireless service provider.

67. (Currently amended) A wireless communication system as recited in claim 59 further comprising A wireless communication system comprising:

a first wireless telephone subscribed to receive one or more services including one of a call forwarding and a voicemail service from a first wireless service provider, the first wireless telephone being a personal wireless telephone and;

a second wireless telephone subscribed to receive one or more services including a hands-free dialing service from a second wireless service provider and sharing at least one service of the one or more services with the first wireless telephone, the second wireless telephone being a vehicular wireless telephone integrated into an electrical control system of a vehicle;

the first wireless telephone and the second wireless telephone sharing a single wireless service plan administered by the first wireless service provider or the second wireless service provider, and a single billing report under the single wireless service plan, the single wireless service plan including a connectivity service for sharing information between the vehicular wireless telephone and the personal wireless telephone;

the first wireless service provider providing a shared voicemail service with the second wireless service provider to the vehicular wireless telephone responsive to receiving a request to share a voicemail service at said first wireless service provider; and

a home location register servicing the vehicular wireless telephone indicating a sharing of the voice mail service of the personal wireless telephone with the vehicular wireless telephone, the home location register instructing a mobile switching center to reroute a call to a voice mail account of the personal wireless telephone

responsive to detection of a no answer by the vehicular wireless telephone of the call.

68. (Currently amended) A wireless communication system as recited in claim 62 further comprising A wireless communication system comprising:

a first wireless telephone subscribed to receive one or more services including one of a call forwarding and a voicemail service from a first wireless service provider, the first wireless telephone being a personal wireless telephone;

a second wireless telephone subscribed to receive one or more services including a hands-free dialing service from a second wireless service provider and sharing at least one service of the one or more services with the first wireless telephone, the second wireless telephone being a vehicular wireless telephone integrated into an electrical control system of a vehicle;

the first wireless telephone and the second wireless telephone sharing a single wireless service plan administered by the first wireless service provider or the second wireless service provider, and a single billing report under the single wireless service plan, the single wireless service plan including a connectivity service for sharing information between the vehicular wireless telephone and the personal wireless telephone, the system, upon detecting a proximity of the personal wireless telephone to the vehicular wireless telephone, re-routing a call intended for the personal wireless telephone to the vehicular wireless telephone while the vehicle of the vehicular wireless telephone is being driven, a wireless local area network communication unit of said vehicle being responsive to receipt of a proper activation code; and

a home location register servicing the vehicular wireless telephone indicating a sharing of the voice mail service of the personal wireless telephone with the vehicular wireless telephone, the home location register instructing a mobile switching center to reroute a call to a voice mail account of the personal wireless telephone responsive to detection of a no answer by the vehicular wireless telephone of the call.

69. (Previously presented) A wireless communication system comprising:
a first wireless telephone subscribed to receive one or more services including one of a
call forwarding and a voicemail service from a first wireless service provider, the
first wireless telephone being a personal wireless telephone and;
a second wireless telephone subscribed to receive one or more services including a
hands-free dialing service from a second wireless service provider and sharing at
least one service of the one or more services with the first wireless telephone, the
second wireless telephone being a vehicular wireless telephone integrated into an
electrical control system of a vehicle;
a home location register servicing the vehicular wireless telephone indicating a sharing of
the voice mail service of the personal wireless telephone with the vehicular
wireless telephone, the home location register instructing a mobile switching
center to reroute a call to a voice mail account of the personal wireless telephone
responsive to detection of a no answer by the vehicular wireless telephone of the
call;
the first wireless telephone and the second wireless telephone sharing a single wireless
service plan administered by the first wireless service provider or the second
wireless service provider, and a single billing report under the single wireless
service plan;
the first wireless service provider providing a shared voicemail service with the second
wireless service provider to the vehicular wireless telephone responsive to
receiving a request to share a voicemail service at said first wireless service
provider.

70. (Previously presented) A wireless communication system comprising:
a first wireless telephone subscribed to receive one or more services including one of a
call forwarding and a voicemail service from a first wireless service provider, the
first wireless telephone being a personal wireless telephone and;
a second wireless telephone subscribed to receive one or more services including a
hands-free dialing service from a second wireless service provider and sharing at
least one service of the one or more services with the first wireless telephone, the

second wireless telephone being a vehicular wireless telephone integrated into an electrical control system of a vehicle;

a home location register servicing the vehicular wireless telephone indicating a sharing of the voice mail service of the personal wireless telephone with the vehicular wireless telephone, the home location register instructing a mobile switching center to reroute a call to a voice mail account of the personal wireless telephone responsive to detection of a no answer by the vehicular wireless telephone of the call;

the first wireless telephone and the second wireless telephone sharing a single wireless service plan administered by the first wireless service provider or the second wireless service provider, and

a single billing report under the single wireless service plan,
the system, upon detecting a proximity of the personal wireless telephone to the vehicular wireless telephone, re-routing a call intended for the personal wireless telephone to the vehicular wireless telephone while the vehicle of the vehicular wireless telephone is being driven, a wireless local area network communication unit of said vehicle being responsive to receipt of a proper activation code.

71. (Previously presented) A wireless communication system as in claim 55 comprising:
the vehicular wireless telephone including a receiver for receiving display image data
encoded according to a Moving Pictures Experts Group (MPEG) standard and a display for displaying said MPEG encoded image data, the connectivity service including relaying calls carrying said MPEG encoded image data from a personal wireless telephone to the vehicular wireless telephone for display responsive to subscriber input.

72. (Previously presented) A wireless communication system, comprising:
a first wireless telephone subscribed to receive one or more services including a voicemail service from a first wireless service provider, the first wireless telephone being a personal wireless telephone and;
a second wireless telephone subscribed to receive one or more services including a hands-free dialing service from a second wireless service provider and sharing at

least one service of the one or more services with the first wireless telephone, the second wireless telephone being a vehicular wireless telephone integrated into an electrical control system of a vehicle, a home location register servicing the vehicular wireless telephone indicating a sharing of the voice mail service of the personal wireless telephone with the vehicular wireless telephone, the home location register instructing a mobile switching center to reroute a call from the personal wireless telephone responsive to the vehicular wireless telephone without requiring a storing of any portion of a signal in the personal wireless telephone after rerouting the call to the vehicular wireless telephone;

the first wireless telephone and the second wireless telephone sharing a single wireless service plan administered by the first wireless service provider or the second wireless service provider, and

a single billing report under the single wireless service plan, the single wireless service plan including a connectivity service for sharing information between the vehicular wireless telephone and the personal wireless telephone.

73. (Canceled)
